

## REMARKS

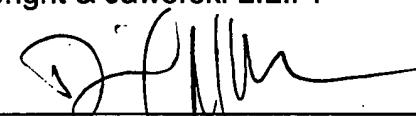

During a telephonic interview with Examiner Rekstad on August 29, 2005, it was determined that the version of the specification and the claims on file with the U.S. Patent and Trademark Office were not those for the above-identified application. Rather, the specification on file appears to be incorrectly drawn from International Application No. PCT/US97/16357. The Examiner and the undersigned agreed that to correct the specification, drawings and claims currently on file with the U.S. Patent and Trademark Office, Applicant would submit a certified copy of International Patent Application No. PCT/KR2000/000116 as a substitute specification. As indicated by applicant at the time of filing, the present application claims priority to International Patent Application No. PCT/KR2000/000116 under 35 USC § 119. Thus, substitution of the specification, drawings, and claims currently (and incorrectly) on file for the present application with the specification, drawings, and claims of PCT/KR2000/000116 is proper.

The enclosed certified copy of International Patent Application No. PCT/KR2000/000116 is submitted as a substitute for the incorrect specification, drawings, and claims currently on file for the present application. No changes have been made to this substitute specification over International Patent Application No. PCT/KR2000/000116. As such, no new matter is being introduced by this substitute specification.

Respectfully submitted,

Fulbright & Jaworski L.L.P.
